

## **Rocfuel Premium Quality Wood Pellets**

### **Delivery Guidelines**

#### **For pneumatic delivery**

The delivery filler point should be no more than 1.5 metres from ground level or accessed via a safe working platform.

The access from lorry to connection should be easily accessible on foot and the driver should not be expected to climb ladders, or climb or remove any obstacles which lie in the path of the filler point.

Ideally, the distance from the back of the lorry to the filler connection should be less than 10 metres.

The discharge area needs to be free of any height restrictions as the trailer body is elevated during discharge. Access should be free of parked cars, skips, bins etc and any security gates unlocked. Our staff will confirm all these details with you and any special requirements prior to a delivery.

#### **For loose bulk deliveries**

There needs to be sufficient access for a large vehicle to lift its tipping trailer to the fuel bay/ storage area and any height restrictions or obstacles need to be removed.
